

THE 2022 TECHMED EVENT

Quantitative contrast-enhanced ultrasound imaging of breast cancer

Massimo Mischi

Eindhoven University of Technology

**THE 2022
TECH-MED
EVENT**

Breast cancer

Leading Sites of New Cancer Cases and Deaths 2022 Estimates

Incidence:

no. 1 for cancer cases in women (31%)

Mortality:

no. 2 for cancer deaths in women (15%)

Female		
Breast	287,850	31%
Lung & bronchus	118,830	13%
Colon & rectum	70,340	8%
Uterine corpus	65,950	7%
Melanoma of the skin	42,600	5%
Non-Hodgkin lymphoma	36,350	4%
Thyroid	31,940	3%
Pancreas	29,240	3%
Kidney & renal pelvis	28,710	3%
Leukemia	24,840	3%
All sites	934,870	

Female		
Lung & bronchus	61,360	21%
Breast	43,250	15%
Colon & rectum	24,180	8%
Pancreas	23,860	8%
Ovary	12,810	4%
Uterine corpus	12,550	4%
Liver & intrahepatic bile duct	10,100	4%
Leukemia	9,980	3%
Non-Hodgkin lymphoma	8,550	3%
Brain & other nervous system	7,570	3%
All sites	287,270	

Diagnostics and screening

Screening by mammography + lesion biopsy

12% suspicious of which 4% positive → many unnecessary biopsies

MRI advised for high-risk groups

Complemented by B-mode ultrasound

Challenge: lesion classification

- Elastography¹
- Doppler²
- CEUS^{3,4}
- Multiparametric^{5,6}

¹ Zhi et al. *Academic Radiology* 2010

² Stanzani et al. *Clinics* 2014

³ Wang et al. *European Radiol* 2016

⁴ Zhao et al. *OncoTargets and Therapy* 2017

⁵ Kapetas et al. *Invest Radiol* 2019

⁶ Li et al. *UMB* 2020

Objective: CEUS imaging of breast cancer

Rationale: cancer growth requires angiogenesis

Angiogenic microvasculature shows **increased**

- Density
- Tortuosity
- Irregularity
- Arteriovenous shunting

Cancer angiogenesis

Folkman et al. *Nature* 1989

Brawer et al. *J Cell Biochem* 1992

Weidner et al. *Am J Pathology* 1993

Russo et al. *BJU Int* 2012

CEUS features of breast cancer

CEUS enhancement pattern	Malignant, n (%)	Benign, n (%)	χ^2	P
Distribution of contrast agent* ←			44.389	0.000
Homogeneous	3 (6.8)	46 (62.2)		
Heterogeneous	37 (84.1)	22 (29.7)		
Partial enhancement with perfusion defect	3 (6.8)	2 (2.7)		
Contour enhancement	1 (2.3)	4 (5.4)		
Enhancement time*			22.300	0.000
Earlier	39 (88.6)	34 (45.9)		
Synchronous	5 (11.4)	38 (51.4)		
Later	0	2 (2.7)		
Enhanced intensity* ←			58.257	0.000
Hypo-enhancement	1 (2.2)	19 (25.7)		
Iso-enhancement	5 (11.4)	44 (59.5)		
Hyper-enhancement	38 (86.4)	11 (14.9)

Less clear	12 (27.3)	26 (35.1)		
Unclear	26 (59.1)	8 (10.8)		

*, statistical significance. CEUS, contrast-enhanced ultrasound.

Heterogenous/irregular hyperenhancement → malignancy

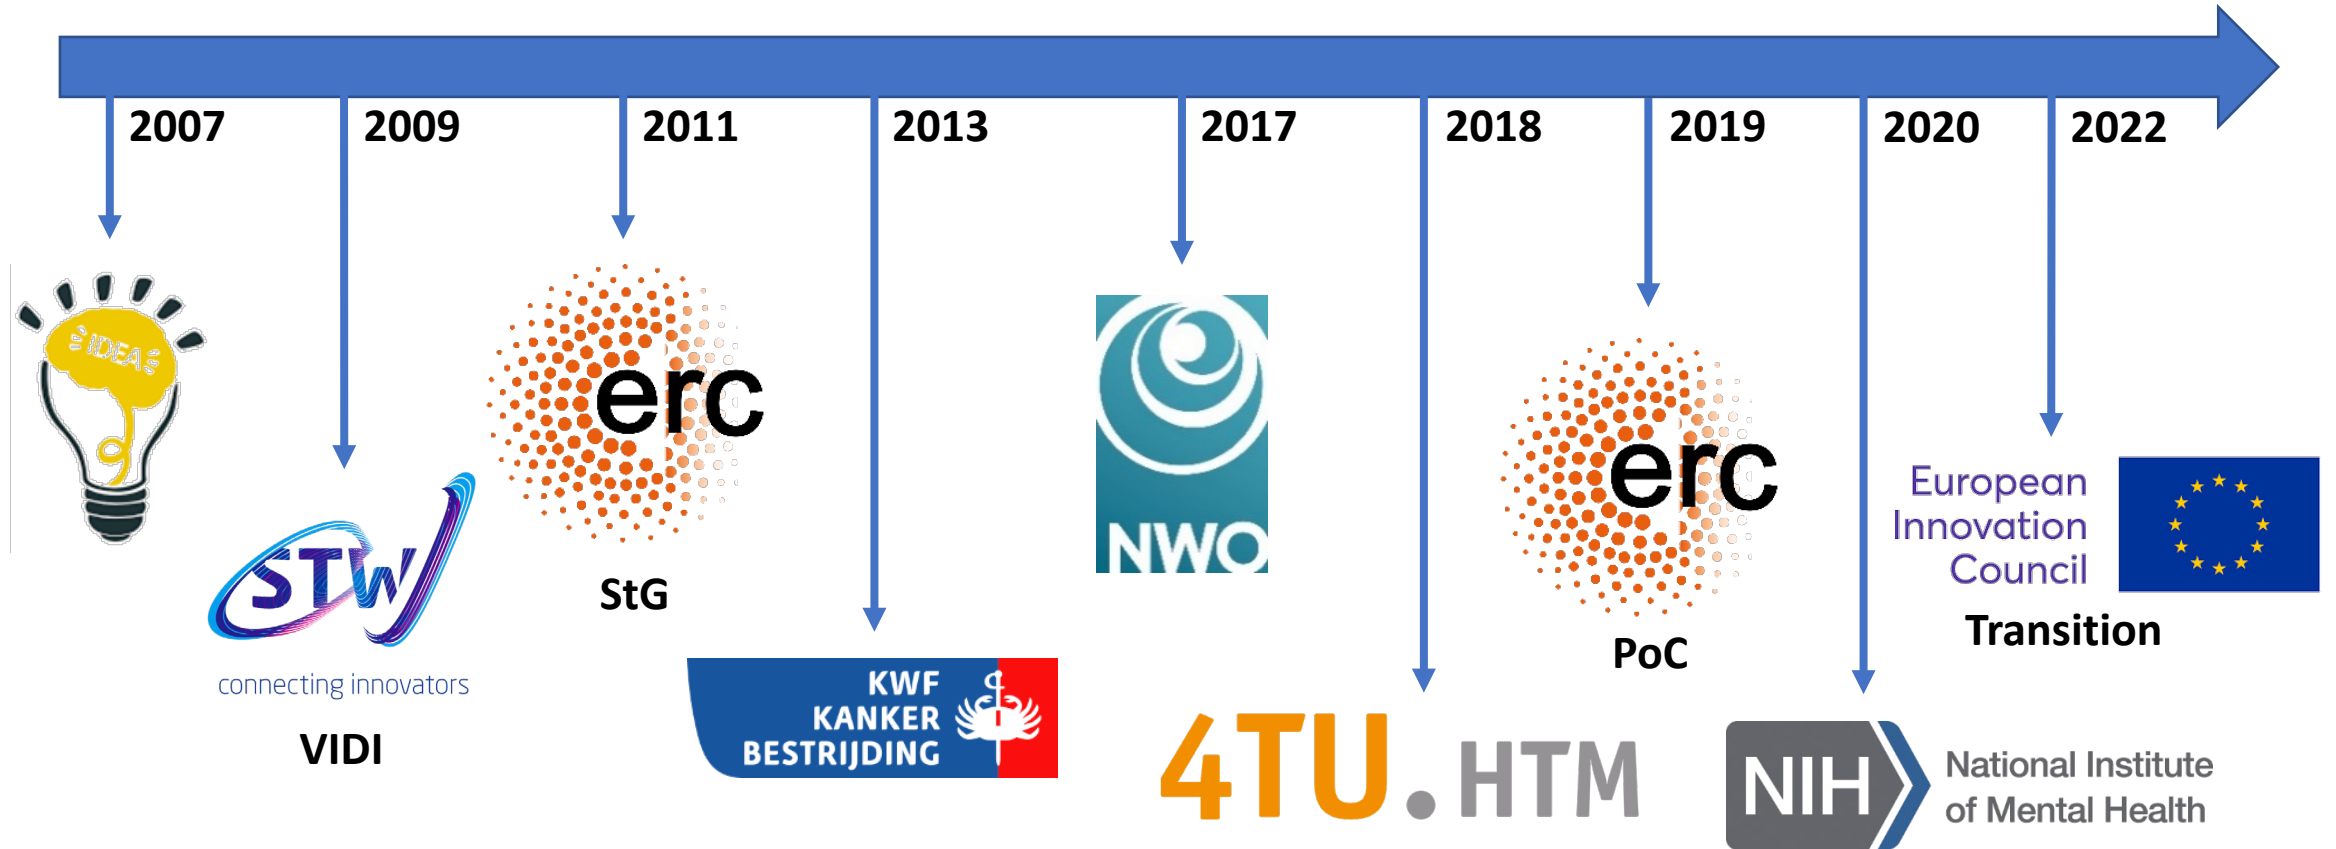

Table 1

Comparison of enhancement patterns between benign and malignant breast lesions.

Enhancement patterns	Benign (n = 41)	Malignant (n = 86)	P value
Enhancement degree ←			<0.001
Hypo-enhancement/iso-enhancement	33(80.5%)	32(37.2%)	
Hyper-enhancement	8(19.5%)	54(62.8%)	
Enhancement order			<0.001
Centrifugal/diffused	31(75.6%)	26(30.2%)	
Centripetal	10(24.4%)	60(69.8%)	
Internal homogeneity ←			<0.001
Homogeneous	29(70.7%)	22(25.6%)	
Heterogeneous	12(29.3%)	64(74.4%)	
Enhancement margin			<0.001
Well defined	25(61.0%)	18(20.9%)	
Poorly defined	16(39.0%)	68(79.1%)	
Enhancement shape ←			0.021*
Regular	16(39.0%)	17(19.8%)	
Irregular	25(61.0%)	69(80.2%)	
Perfusion defects			<0.001
Absent	36(87.8%)	45(52.3%)	
Present	5(12.2%)	41(47.7%)	
Surrounding vessels			<0.001
Absent	33(80.5%)	33(38.4%)	
Present	8(19.5%)	53(61.6%)	
Diameter			0.003
Not enlarged	35(85.4%)	51(59.3%)	
Enlarged	6(14.6%)	35(40.7%)	

* Enhancement shape (P= 0.021) will not be significant after Bonferroni Correction.

Histology

CUDI targeted biopsies

Biopsies targeted by CUDI compared to systematic biopsy and mpMRI targeted biopsies in 142 patients

Detection rates csPCa:

SBx = 39% (56/142)

mpMRI-TBx = 29% (41/142)

CUDI-TBx = 28% (40/142)

2D multiparametric ultrasound (mpUS)

Multiparametric ultrasound in the detection of prostate cancer: a systematic review

Arnoud Postema · Massimo Mischi · Jean de la Rosette · Hessel Wijkstra

World J Urol (2015) 33:1651–1659

1655

GSU, C-TRUS, DCE-US and SWE are expected to show improved results in the near future. **By effectively combining these ultrasound techniques, all targeting different properties of malignant tissue, a valuable clinical tool with all the advantages of ultrasound could be constructed.** The literature shows that combining ultrasound modalities in a crude fashion can already improve sensitivity by 13–59 %.

3D CUDI

Advantages

- Entire gland in one go
- Faster clinical workflow
- Complete kinetic modeling

3D CUDI

Vascular reconstruction by tractography

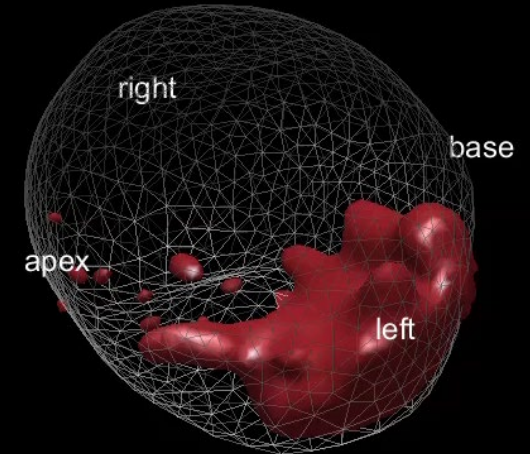

Tractography

CUDI

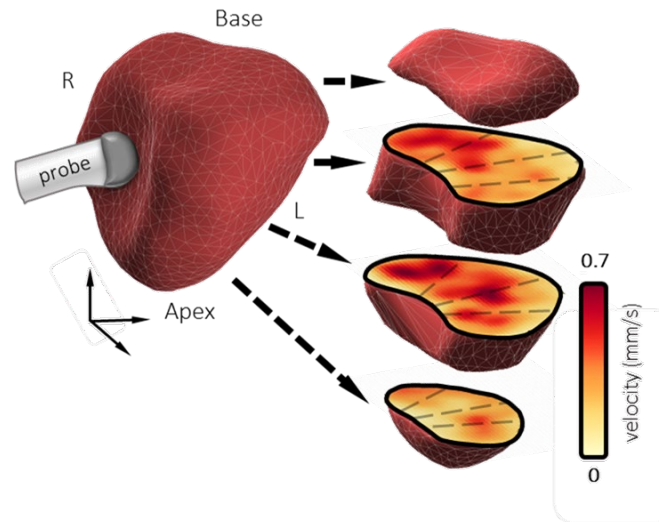

Histology

3D mpUS: prediction of biopsy outcome

54 patients compared to 12-core SBx

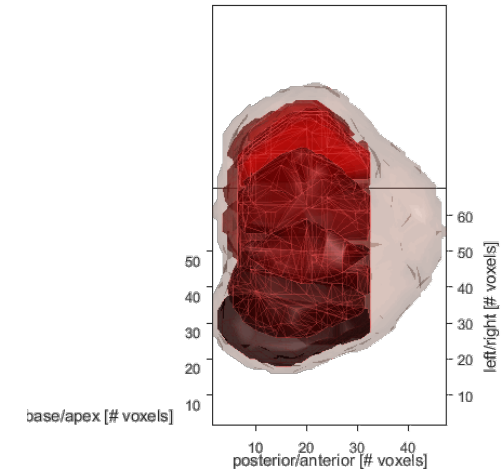

Features

- B-Mode – LogiqE9 (RIC9-5 probe)
- CUDI – LogiqE9 (0.3 Hz, MI = 0.1, 2.4 mL SonoVue)
- SWE – Aixplorer (multiplane 3D reconstruction)

3D mpUS: prediction of biopsy outcome

54 patients compared to 12-core SBx

Features

- B-Mode
- CUDI
- SWE

Machine learning
(Gradient boosting)

	ROC curve area*
CUDI	0.81 ± 0.12
SWE	0.66 ± 0.12
CUDI + SWE	0.85 ± 0.11

*9-fold cross validation

Breast cancer data – 2D CEUS

B-mode

CEUS

- 120 patients (18-82 years, average: 52 years)
- B-Mode + CEUS + biopsy
- October 2015 - September 2016

CEUS setting

- Siemens Acuson S3000
- Linear transducer (9L4HD)
- CPS at 4 MHz
- $MI \leq 0.07$
- 4.8-mL bolus of SonoVue

Enhancement heterogeneity

Benign breast lesion with
low enhancement heterogeneity

Malignant breast lesion with
high enhancement heterogeneity

CEUS enhancement grade

Grade 1, Hyper-enhanced

Grade 2, Partly enhanced

Grade 3, Poorly enhanced

Grade 4, Hypo-enhanced

Quantitative enhancement grading

Grouped patients of grade 1 or 2 64/120	Correlation coefficient (r)	0.103 ± 0.076	0.085 ± 0.080	0.189
	Spectral coherence (ρ)	0.441 ± 0.208	0.412 ± 0.216	0.362
	Mutual information (I)	0.473 ± 0.266	0.322 ± 0.252	0.002
	Conditional entropy (H)	5.351 ± 0.359	5.543 ± 0.299	0.002

Results - Lesion classification

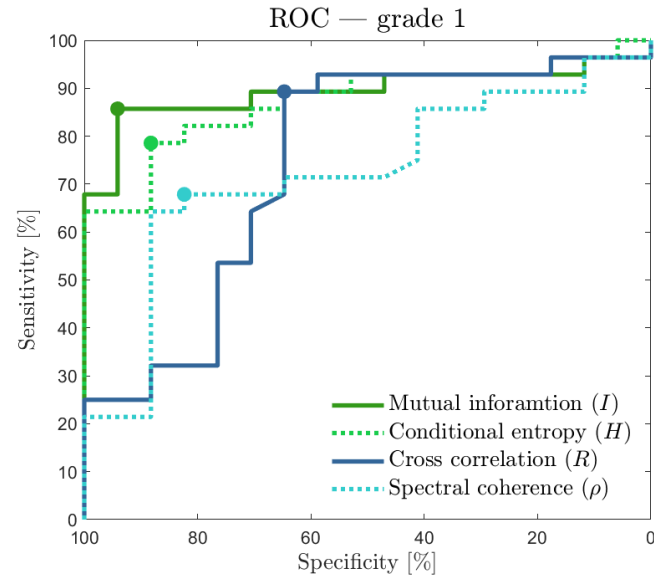

Table 3 Comparison of diagnostic performance of spatiotemporal parameters					
	Parameter	Sensitivity (95% CI)	Specificity (95% CI)	AUC	P value
Lesions of grade 1 (45/120)	Correlation coefficient (r)	89.3% (72.5 96.9)	64.7% (40.5 86.7)	0.743	0.010
	Spectral coherence (ρ)	67.9% (48.3 82.7)	82.3% (57.3 100)	0.724	0.015
	Mutual information (I)	85.7% (68.2 96.4)	94.4% (68.8 100)	0.893	<0.001
	Conditional entropy (H)	78.6% (60.8 92.9)	88.2% (41.7 100)	0.874	<0.001
Grouped lesions of grade 1 or 2 (64/120)	Correlation coefficient (r)	80.5% (66.7 90.5)	66.5% (37.8 75.0)	0.704	0.008
	Spectral coherence (ρ)	63.4% (48.2 76.3)	75.9% (53.0 91.7)	0.670	0.034
	Mutual information (I)	90.2% (79.6 97.5)	82.6% (61.2 94.5)	0.848	<0.001
	Conditional entropy (H)	78.1% (62.6 89.7)	78.3% (56.0 90.0)	0.817	<0.001

Conclusions

- CUDI spatiotemporal analysis of enhancing breast lesions (64/120) shows good classification performance, especially by mutual information (AUC=84.8%, Se=90.2%, Sp=82.6%)
- More quantitative parameters should be evaluated that reflect the complex perfusion patterns in breast lesions
- Hypoenhancing lesions call for a multiparametric approach involving other complementary features (texture, geometry, stiffness)
- 3D CEUS is expected to provide more accurate classification with motion compensation

Thank you!
